

### Top 3 app ideas

Ariana Daney

State tracker -- an app that tracks all the states a user has been to. The user can select the state that they went to and that state could then be colored on a map

Money calculator -- this app would keep track of how much money the user makes a month. The user could select the month in question and enter how many hours they worked and how much they made per hour. The app would then calculate how much they made.

Color palettes -- this app keeps organized different color palettes. The user can create a palette and name it (ex. "New room") and then add different colors to that palet to look back on later.
